Data access simplified.
Ideas magnified.

Let energy software developers access your energy data and save you money through their energy management tools.

PG&E's Share My Data platform lets you share your energy usage information with companies that are developing new energy management tools so that you can **lower your energy costs.**

Secure data sharing

A safe, streamlined way to give companies that you plan to do business with authorization to access your energy data.

Options for authorizing access

Log into your PG&E account online or go to the website of the company with which you are planning to share your energy data. You are free to instantly cancel your authorization at any time.

Why share?

Understand the costs of owning and managing products such as electric vehicles, solar panels, and home appliances.

For all PG&E customers

Regardless of meter type you can share data if you'd like to. However, only registered and approved third parties can receive data.

Standard APIs

Share My Data gives you the ability to automatically download your own energy data so you can gain a better understanding of your home's energy usage.

How to share

Get step-by-step instructions for authorizing companies to access your PG&E energy information.
