
PACIFIC GAS AND ELECTRIC COMPANY

2021 WILDFIRE MITIGATION PLAN

SECOND ERRATA

RULEMAKING 18-10-007

APRIL 22, 2021

Second Errata to Pacific Gas and Electric Company’s 2021 Wildfire Mitigation Plan

Pacific Gas and Electric Company (PG&E) has identified four errata to the 2021 Wildfire Mitigation Plan (2021 WMP), submitted February 5, 2021, in addition to the errata submitted on March 17, 2021. These four errata, which all address the same subject, were identified during a review of our 2021 WMP. Our 2021 WMP target for Enhanced Vegetation Management (EVM) for 2021 is to perform EVM on 1,800 line miles.¹ However, in four places we included an approximate number of trees associated with the 1,800 mile target. The figure “approximately 190,000 trees” was provided as a supplemental insight into the approximate number of trees that would be worked as part of completing EVM work on 1,800 miles. The number of trees associated with EVM performed on a specific line mile can vary, meaning that the ultimate number of trees that will be worked in completing the 1,800 miles will vary from the ~190,000 tree estimate. We have identified that this language could be misunderstood and are therefore deleting the references to the number of trees to avoid any confusion as to the 2021 target for the EVM program.

The updates to the 2021 WMP are described below and this document has been posted to the PG&E Wildfire Mitigation Plan website: www.PGE.com/wildfiremitigationplan (WMP Website).

Table 1: Summary of Updates to the WMP

Location	Original	Updated (with redline)
p. 229	Complete 1,800 circuit miles and mitigate approximately 190,000 trees.	Complete 1,800 circuit miles and mitigate approximately 190,000 trees.
p. 286	Complete 1,800 circuit miles and mitigate approximately 190,000 trees.	Complete 1,800 circuit miles and mitigate approximately 190,000 trees.
p. 631	At this time, PG&E is forecasting to work on approximately 1,800 circuit miles and mitigate approximately 190,000 trees in 2021, for the EVM program.	At this time, PG&E is forecasting to work on approximately 1,800 circuit miles and mitigate approximately 190,000 trees in 2021, for the EVM program.
p. 910	Complete 1,800 circuit miles and mitigate approximately 190,000 trees.	Complete 1,800 circuit miles and mitigate approximately 190,000 trees.
