

**Save energy and money with  
PG&E's energy efficiency rebates.**

November 15, 2008

Dear Pool Owner:

Pacific Gas and Electric Company would like to help you save energy when you switch to a multi-speed pool filtration equipment.

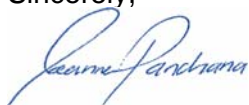

You may be eligible for a rebate on a new energy efficient pool pump or motor which will save you up to \$477 on your annual pool filtration.

Not only can you save up to 1,400 kilowatt hours per year\*, you would receive a \$100 rebate when you switch to an eligible two-speed pump, two-speed motor or variable speed pump (some models may require an additional controller).

With a potential savings of \$477 per year, that could translate up to a savings of \$4,770 over the estimated 10-year lifetime of the product \*\*. Additionally, new pumps and motors run quieter than conventional systems, last much longer, and keep your pool water cleaner.

For more ways to save energy and a list of qualifying products, visit our website at [www.pge.com/pools](http://www.pge.com/pools) or call the PG&E Smarter Energy Line at 1-800-933-9555.

Sincerely,

Joanne Panchana  
Pool Pump and Motor Rebate Program  
Pacific Gas and Electric Company

\* These savings assume that a 1.5-hp two speed pump replaces a single-speed pump.

\*\* Savings are based on an average of the top two summer residential electric rate tiers.
