

Community Wildfire Safety Program

Building a safer and stronger electric system

Our safety efforts are preventing wildfires, improving reliability and reducing costs for customers in the long term.

Our layers of protection have reduced wildfire risk from PG&E's equipment by more than **90%**.

These efforts are focused in high fire-risk areas. This is more than half of our service territory.

Inspecting: Using regular inspections to find and fix any potential problems

Vegetation Management: Keeping trees away from powerlines

Hardening and Undergrounding: Installing stronger lines and poles and moving powerlines underground

New Solutions: Using the latest technologies and equipment

Safety Outages: Temporarily turning off power for safety

LEARN MORE

To learn more about our Community Wildfire Safety Program, visit [pge.com/cwsp](https://www.pge.com/cwsp).

PG&E's electric system has never been safer. And we continue to make it safer and more reliable every day.

To minimize the impact of outages, we are:

- ✓ Making poles and powerlines stronger
- ✓ Preventing hazards by trimming trees and installing animal guards
- ✓ Undergrounding our powerlines where wildfire risk is highest
- ✓ Expanding backup power support

To help our customers prepare for potential outages, we are providing:

Backup power options

Find out about eligibility for our backup power programs at pge.com/backuppower.

Emergency planning support
