

ELECTRIC SCHEDULE NEM2V
VIRTUAL NET ENERGY METERING SERVICE

Sheet 1

APPLICABILITY: This virtual net energy-metering schedule is applicable to a multi-tenant or multi-meter¹ Eligible NEM2V installation on a single eligible Property, as defined below, and that includes the following:

- a. A Generator Account that:
 - 1) consists of a Renewable Electrical Generation Facility (REGF)², sized no larger than the energy requirements of all Benefitting Accounts; and
 - 2) is taking service on an applicable time-of-use TOU rate
 - 3) has no load other than that required by the REGF or the combination of such (except as described in Special Condition 6); and
 - 4) takes service, with the generator owner or their designee as the Customer of record (“Owner”); and
- b. Benefitting Account(s), each of which:
 - 1) takes service from PG&E; and
 - 2) is an individually metered, electric account serving a tenant or common area with no other generating facility interconnected with PG&E on the account; and
 - 3) is taking service on an applicable TOU^{3,4} rate schedule
 - 4) does not participate in another virtual net energy metering program or the RES-BCT program.

Pursuant to Decision (D.) 23-11-068, this Schedule is closed to new customers with applications submitted after February 14, 2024. Notwithstanding the foregoing, customers applying on or after February 15, 2024, but before the Virtual Net Billing Tariff (NBTV) adopted by Decision 23-11-068 is approved, may apply for interconnection under this Schedule subject to the terms of Special Condition 10. Customers applying before February 15, 2024, are subject to the application requirements specified in Special Condition 4 (Interconnection) to maintain eligibility on NEM2V.

(N)
|
(N)
(L)

¹ Multi-meter” means two or more utility revenue meters, including master meters, participating in the NEM2V program, in addition to the Generator Account meter.

² Consistent with Decision 22-12-056, multiple REGFs on an eligible Property served by different Electric Accounts are allowed to be treated as one generator, with credits allocated across Benefitting Accounts on the Property. Also, consistent with Decision 14-05-033, and as modified by Decision 16-01-044, NEM paired storage may interconnect under this tariff subject to the metering and sizing requirements specified in D.14-05-033. For a REGF with storage (NEM2V Storage), please see Special Condition 6.

³ Customers on Schedules such as ET, ES, ESR, which have no available corresponding TOU Rate are not required to switch to TOU rates, unless and until such a rate becomes available.

⁴ Customers, including those at Benefitting accounts, when the arrangement switches from Schedule NEMV to this NEM2V successor tariff are required to take any applicable TOU rate, beginning at the time the customer switches to the NEM successor tariff, pursuant to D.14-03-041 and D.16-01-044. Any account not found to be on a TOU rate will automatically be defaulted to the specified TOU rate defined in the “Rate” section below.

Regulatory Proceedings and Rates

ELECTRIC SCHEDULE NEM2V
VIRTUAL NET ENERGY METERING SERVICE

Sheet 2

APPLICABILITY: (Cont'd.) A NEM2V REGF greater than one megawatt seeking interconnection with PG&E's transmission system under this Rate Schedule that is not subject to one of the exceptions described in Electric Tariff Rule 21 Section B.1 (*Applicability*) shall interconnect in accordance with the instructions provided there. Such customers shall also apply via PG&E's online application portal (*YourProject*) for the purpose of initiating an application and determining eligibility of their REGF under this Schedule. This requirement is not applicable to such REGFs with Permission to Operate letters received as of May 6, 2022, or proposed REGFs with materially complete interconnection applications submitted as of May 6, 2022.

(L)

(L)

Property: All of the real property and apparatus employed in a single multi-tenant or multi-meter facility on contiguous parcels of land. These parcels may be divided by a dedicated street, highway or public thoroughfare or railway, so long as they are otherwise contiguous, part of the same single multi-tenant or multi-meter facility, and all under the same ownership.

The exports from the Generator Account are allocated to the Benefitting Accounts as described in the Special Condition 3 below.

The Generator Account and the Benefitting Accounts will be referred to collectively in this tariff as a "NEM2V Arrangement."

A Qualified Customer is either:

- 1) the Owner or Operator of the multi-tenant, multi-meter Eligible NEM2V Property with one or more separately metered accounts;
- 2) an entity authorized by the owner to install and/or operate the REGF on the Eligible NEM2V Property and who will be the IOU's customer of record for the REGF; or
- 3) a tenant/occupant⁵ in the Eligible NEM2V Property with a separately metered account, which received credit from the REGF.

⁵ While this refers to a single metered tenant/occupant, "Multi-Meter Property" requires that there be two or more tenant/occupants, each with its own utility revenue meter participating in the NEM2V Arrangement, in addition to the (N) Generator Account meter.

(Continued)

ELECTRIC SCHEDULE NEM2V
VIRTUAL NET ENERGY METERING SERVICE

Sheet 3

APPLICABILITY: A REGF means a generating facility that generates electricity by using:
(Cont'd.)

- a) biomass,
- b) solar thermal,
- c) photovoltaic,
- d) wind,
- e) geothermal,
- f) fuel cells using renewable fuels,
- g) small hydroelectric generation (but a small hydroelectric generation facility is not an eligible REGF if it will cause an adverse impact on instream beneficial uses or cause a change in the volume or timing of streamflow),
- h) digester gas,
- i) municipal solid waste conversion,
- j) landfill gas,
- k) ocean wave,
- l) ocean thermal, or
- m) tidal current,

and any additions or enhancements to the generating facility using that technology pursuant to paragraph (1) of subdivision (a) of Section 25741 of the Public Resources Code. These renewable sources are defined in the latest version of the California Energy Commission's (CEC's) Renewables Portfolio Standard (RPS) Eligibility Guidebook and the Overall Program Guidebook.⁶

Service Under Schedule NEM2V is available to Customers that provide PG&E with:

- a. a completed, signed NEM2V application and interconnection agreement as described in Special Condition 4, including all supporting documents and required payments; AND
- b. evidence of the Customer's final inspection clearance from the governmental authority having jurisdiction over the REGF.

⁶ The RPS Guidebooks can be found at: <https://www.energy.ca.gov/programs-and-topics/programs/renewables-portfolio-standard>

ELECTRIC SCHEDULE NEM2V
VIRTUAL NET ENERGY METERING SERVICE

Sheet 4

APPLICABILITY: **Network Grid Limitations** – Portions of San Francisco and Oakland, where PG&E has a network grid, have generation export limitations. Customers seeking generator interconnections in San Francisco and Oakland must contact PG&E before beginning any work.

(Cont'd.)

Disconnect/Reconnect – PG&E will inform the Owner of any disconnect/reconnect procedure charges they may expect at the time of interconnection. Typically these charges range from no charge to \$4000.00, depending on individual circumstances, such as (i) whether the disconnection can be performed locally at a switch or requires additional manpower for circuit switching and/or disconnection work at multiple locations; (2) whether or not the work will be performed on overtime, either due to Qualified Customer's request or the needs of adjacent customers; (3) if the customer requests the PG&E resources to standby for reconnection, and (4) other factors.

Owner Obligations – The Owner must:

- a. comply with all applicable safety and performance standards as delineated in PG&E's Electric Rule 21* and other applicable tariffs, safety and performance standards established by the National Electrical Code, the Institute of Electrical and Electronics Engineers, and accredited testing laboratories such as Underwriters Laboratories and, where applicable, rules of the California Public Utilities Commission regarding safety and reliability. The Owner is solely responsible for the ongoing maintenance and operation of the REGF; and
- b. keep in force the amount of property, commercial general liability and/or personal liability insurance the Owner has in place at the time they initiate service on this tariff; and
- c. agree that PG&E may from time to time release to the California Energy Commission and/or the California Public Utilities Commission, information regarding the NEM2V Arrangement, including the Owner's name, and their REGF location, capacity and operational characteristics, and Qualified Customer names at the Benefitting Accounts. As a condition of interconnection, pursuant to CPUC Decision 23-11-068, PG&E is required to provide certain data, including but not limited to confidential customer information, to the CPUC and its contractors, and to the California Department of Industrial Relations; and
- d. agree to and comply with all applicable rules and requirements of this NEM2V Rate Schedule; and
- e. verify as a part of each interconnection request for this tariff, that all major solar system components are on the verified equipment list maintained by the California Energy Commission and other equipment, as determined by PG&E, is verified by the customer as having safety certification from a nationally recognized testing laboratory.
- f. provide as a part of each interconnection request for this tariff, (i) a warranty of at least 10 years on all equipment and on its installation, or (ii) a 10-year service warranty or executed "agreement" ensuring proper maintenance and continued system performance.

(T)
|
(T)

* See Rule 21 Section B.1 Applicability regarding NEM-2 projects greater than 1 MW interconnecting on Transmission.

(Continued)

ELECTRIC SCHEDULE NEM2V
VIRTUAL NET ENERGY METERING SERVICE

Sheet 5

APPLICABILITY: **Modifications to the REGF** – If the NEM2V Arrangement’s REGF has not been previously approved for interconnection by PG&E, or where any modification to the previously approved REGF has been made, the Owner must complete the interconnection process in Special Condition 4 of this tariff.
(Cont'd.)

Qualified Customers on Direct Access (DA) or Community Choice Aggregation Service (CCA) – Certain incremental billing and metering costs set forth in this schedule that are related to net energy metering are applicable to Electric Service Providers (ESPs) and Community Choice Aggregators (CCAs) serving eligible Qualified Customers.

This service is not applicable to a Direct Access (DA) Qualified Customer where the Qualified Customer’s ESP does not offer a net energy metering tariff. In addition, if a Qualified Customer participates in direct transactions with an ESP that does not provide distribution service for the direct transactions, the ESP, and not PG&E, is obligated to provide virtual net energy metering to the Qualified Customer.

Demand Response Programs – Benefiting account Customers are permitted to participate in demand response or emergency reliability programs for which the customer is otherwise eligible. Incentives are based on the individual customer’s load and do not include excess generation exported to the grid during a demand response event.

(N)/(D)
|
(N)/(D)

Change in Owner – A change in the Owner responsible for the NEM2V Arrangement (“Change of Owner”), where no modification to the Eligible REGF has been made, does not require the new Owner to complete the interconnection process in Special Condition 4, as long as the requirements of this section are met.

RATES: For the purposes of calculation of all customer charges, standby charges, and demand charges a NEM2V customer should be treated identically as a NEM2 customer. The rate and charges for each Benefitting Account under this schedule will be in accordance with its PG&E otherwise-applicable metered rate schedule (OAS). The Qualified Customer at each Benefitting Account served under this schedule is responsible for all charges from its OAS including monthly minimum charges, customer charges, meter charges, facilities charges, demand charges and surcharges.

Advice 7211-E
Decision D. 23-11-068

Issued by
Shilpa Ramaiya
Vice President

Submitted March 15, 2024
Effective March 15, 2024
Resolution

ELECTRIC SCHEDULE NEM2V
VIRTUAL NET ENERGY METERING SERVICE

Sheet 6

RATES:
(Cont'd.)

For Benefitting Accounts on general service OASs, the "Average Rate Limiter" and all other demand charges will be based on the demand in kilowatts as measured only on the energy being consumed at the Benefitting Account from PG&E. The power factor, when it applies on the OAS, will be based on the energy consumed at the Benefitting Account from PG&E and the average power factor over the past 12 billing months of operation prior to starting on NEM2V. A Benefitting Account, without 12 billing months of power factor history, will have its power factor estimated based on the nature of the connected loads and their hours of operation. Power factor will be subsequently applied to the bill at the Benefitting Account until the Qualified Customer demonstrates to PG&E's satisfaction that adequate correction had been provided. PG&E will continue to monitor and review the power factor and if warranted, change the power factor correction on the Benefitting Account's bills.

Charges for energy (kWh) at the Benefitting Account supplied by PG&E, ESP or CCA, as applicable, will be calculated in accordance with Billing (Special Condition 3 below).

For DA or CCA Service Qualified Customers being billed under Consolidated PG&E Billing service, the ESP or CCA is responsible for providing the billing information regarding the applicable generation related bill charges or credits to PG&E on a timely basis.

Customers must receive service on a TOU rate schedule, with no exceptions and no option to opt-out to an underlying rate that is not time differentiated, at the time the Customer begins service on this tariff.

At the time the Generator Account Customer completes its interconnection application and receives approval from PG&E to operate, all accounts in the NEM2V Arrangement already on a TOU rate shall be permitted to remain on their current TOU rate. If any account is not currently taking service on a TOU rate, it will be defaulted to E-TOU-C if it is a residential account or to the TOU version of their current rate for all other classes. If defaulted due to not being on a TOU rate, the rate can subsequently be changed to another applicable TOU rate by contacting PG&E, effective on the eligible customers subsequent billing period.

(T)

Residential Customers on this tariff, who are required to take TOU rates prior to the implementation of default TOU rates for residential customers, and who are on any TOU rate (including a TOU pilot rate) prior to the implementation of default residential TOU rates, have the option to stay on that TOU rate for a period of five years from the date the customer commences the TOU rate.

The Owner of the Generator Account served under this schedule will be billed under the TOU OAS that contains the applicable customer-, minimum- and/or meter charges. Qualified Customers who have elected to pay a one-time fee for the installation of a TOU meter pursuant to Special Condition 1.a.(2) of this Schedule NEM2V will be placed on an OAS that does not contain a meter charge. If the Owner elects the monthly meter charge option pursuant to Special Condition 1.a.(2), the Generator Account shall be placed on an OAS containing a meter charge. The Owner at the Generator Account served under this schedule is responsible for all charges from its OAS including monthly minimum charges, customer charges, meter charges, facilities charges, demand charges and surcharges, as well as the charges in this Schedule NEM2V, including those in Special Conditions 1.a and 2, where applicable.

(Continued)

Advice	5759-E	Issued by	Submitted	February 14, 2020
Decision	D.19-07-004	Robert S. Kenney	Effective	March 1, 2020
		Vice President, Regulatory Affairs	Resolution	

ELECTRIC SCHEDULE NEM2V
VIRTUAL NET ENERGY METERING SERVICE

Sheet 7

RATES:
(Cont'd.)

Generator Accounts eligible for service under NEM2V are exempt from the requirements of Schedule S—Standby Service.

PG&E rates and rate design, including the rates and rate design reflected in this Tariff, are subject to change from time to time. Customers should take this into consideration when making any long-term decisions based on rate structures that are currently in place.

SPECIAL CONDITIONS:

1. **METERING:** NEM2V net energy metering shall be accomplished at:

a. The Generator Account* where the REGF is located, using either: (T)

- 1) An interval meter (capable of recording the REGF's output in up to fifteen minute increments), if required by PG&E to allocate the Eligible Energy Credit based on the OAS of the Benefitting Accounts in an NEM2V Arrangement. For example, if any Benefitting Accounts in the NEM2V Arrangement takes service on an OAS with a Demand Charge where the Qualified Customer at the Benefitting Account opts to receive a demand credit pursuant to Special Conditions 1 and 3.g, the Owner must install a PG&E interval meter under this option. The Owner shall be responsible for, and shall bear all costs associated with PG&E providing and installing an interval meter for the Generator Account. The cost of the interval meter installation will be determined by PG&E and will vary on a site-specific basis as described below.

If the Owner is participating in a renewable incentive program such as the California Solar Initiative (CSI) Program or the Self-Generation Incentive Program (SGIP), for the Generator Account then the meter installed under this option may also be used to issue performance payments consistent with the current incentive program handbook requirements. This tariff's metering requirements will take precedence over the incentive program metering requirements for the performance meter.

The Owner or Operator selecting this option to use a single meter for the dual purpose of tracking the generation for the NEM2V Generator Account and to issue performance based incentives will need to install a meter that must be: 1) a PG&E owned meter, 2) a PG&E read meter where PG&E will read the meter data for purposes of providing an incentive payment, and 3) installed in a location approved by PG&E. In addition to this metering requirement for incentives, the Owner and Operator will need to contract separately for any Performance Monitoring and Reporting Service (PMRS) as required by the incentive program.

* There may be additional metering requirements under Rule 21 Section B.1 Applicability regarding net energy metering NEM-2 projects greater than 1 MW interconnecting on Transmission. (T)
(T)

(Continued)

ELECTRIC SCHEDULE NEM2V
VIRTUAL NET ENERGY METERING SERVICE

Sheet 8

SPECIAL
CONDITIONS:
(Cont'd.)

1. METERING: (Cont'd.)

- a. The Generator Account where the REGF is located, using either:
(Cont'd.)

If any Benefitting Accounts in the Arrangement takes service on an OAS with a Demand Charge where the Qualified Customer at the Benefitting Account opts to receive a demand credit pursuant to Special Condition 3.g, the Owner must bear the cost of installing a PG&E interval meter under this option.

The costs for the meter will be:

Meter Type	Cost
Self-contained Meter Installation (600V)	\$788.33
Transformer-rated Meter Installation (600V)	\$1,712.89
Primary Transformer-rated Meter Installation (5 kV)	\$6,800.25
Primary Transformer-rated Meter Installation (15 kV)	\$7,410.16
Primary Transformer-rated Meter Installation (25 kV)	\$12,779.41

If Generator Account is on DA service and the Owner uses a third-party Meter Data Management Agent (MDMA) the Owner will be responsible for any and all costs associated with providing PG&E acceptable interval data into the PG&E system on a timely basis.

- 2) A "TOU" (TOU) meter, if based on review of the Benefitting Accounts' OASs PG&E is able to allocate the Eligible Energy Credits. This option will only be available until any Benefitting Account OAS change necessitates that the Owner provide an interval meter per (i) in order to properly allocate Eligible Energy Credits. The Owner shall be responsible for, and shall bear all costs associated with, PG&E providing and installing a TOU meter for the Generator Account (or upgrading to an interval meter if required in the future). For the TOU option, the Owner may choose charges based on either a one-time, up-front fee or as a monthly meter charge. Prices are as follows:

TOU Meter Option	One Time Upfront Fee	Monthly Meter Charge
Single Phase	\$755.00	Based on the OAS monthly meter charge
Three Phase	\$890.00	Based on the OAS monthly meter charge

(Continued)

ELECTRIC SCHEDULE NEM2V
VIRTUAL NET ENERGY METERING SERVICE

Sheet 9

SPECIAL
CONDITIONS:
(Cont'd.)

1. METERING: (Cont'd.)
 - a. The Generator Account where the REGF is located, using either: (Cont'd.)
 - 3) If the Generator Account is found to have any load in addition to that of the REGF's inverter(s), PG&E reserves the right to require the Owner to install a bi-directional PG&E meter appropriate to its otherwise applicable rate schedule and a generator output meter to determine the total generation and total usage at the Account. Additionally, the Owner will need to furnish at the Owner's expense a meter socket for the generation output meter and provide PG&E with unrestricted access to that meter and socket. If the Generator Account's existing electrical meter, together with the generation output meter, is not capable of determining the total usage necessary to bill its otherwise applicable rate schedule, the Owner shall be responsible for all expenses involved in purchasing and installing such metering.
 - b. Each Benefitting Account using PG&E metering appropriate to its TOU OAS. If the Qualifying Customer is on a demand rate OAS and chooses to receive demand credit, the Qualifying Customer is required to have a meter capable of recording demand data on a 15-minute interval basis. The cost of this meter is the responsibility of the Benefitting Account – or is covered in the OAS of the Benefitting Account. If the Owner in an arrangement where one or more Qualifying Customers have opted to receive demand credits has taken the TOU meter option as described in (2) above for the Generator Account, the Owner will be required to pay for the cost of the interval meter option described in a (1) above for the Generator Account meter. Until the Owner pays this the cost for an interval meter, the Qualifying Customer electing to receive a demand credit will not receive the demand credit. (T)

2. ONE-TIME SETUP AND MODIFICATION CHARGES:

Setup – PG&E will bill the Generator Account a one-time setup charge of **\$12.00** per Benefitting Account in the NEM2V Arrangement when the Owner submits Appendix A to first establish service for a Benefitting Account, as described Special Condition 3.b. The total setup fee will be limited to no more than \$500.00 per NEM2V Arrangement.

Modification – The Owner may make modifications as frequently as needed to any Benefitting Account with a changed allocation when the Owner submits a new Appendix A with a change to the Annual Eligible Energy Credit Allocation, as described Special Condition 3.h. There will be no charge for up to one change per Benefitting Account per Relevant period; however, subsequent changes per Relevant period will be charged **\$3.00 per account change** billed to the Generator Account.

(Continued)

Advice	5245-E	Issued by	Date Filed	March 8, 2018
Decision	17-12-005	Robert S. Kenney	Effective	April 7, 2018
		Vice President, Regulatory Affairs	Resolution	

ELECTRIC SCHEDULE NEM2V
VIRTUAL NET ENERGY METERING SERVICE

Sheet 10

SPECIAL
CONDITIONS:
(Cont'd.)

2. ONE-TIME SETUP AND MODIFICATION CHARGES: (Cont'd.)

Site Assessment – PG&E includes in its NEM2V applications (Forms 79-1131-02 or 79-1142-02) site assessment questions to collect the necessary technical details to help PG&E and the Owner determine the options for safely interconnecting the applicant's REGF. If after review of these completed forms PG&E determines a site assessment is essential, then PG&E may conduct a site assessment at no cost to the Owner. Owners are reminded that entering PG&E sealed sections of their service panels is unsafe and not permitted without PG&E's supervision and express authorization.

Demand Credit – If a NEM2V Qualified Customer is on an OAS with demand charges and opts to receive a demand credit, they must notify PG&E in writing. PG&E will charge the Qualified Customer the upfront payment of \$500 per Benefiting Account receiving a demand credit. PG&E will make the change effective within thirty (30) days of the latter of (a) the receipt of the written request and (b) the installation of an interval meter at the Generator Account.

(T)

3. BILLING:

For each Benefitting Account, consumption or production shall be valued as follows:

a. Annual Eligible Energy Credit

The Annual Eligible Energy Credit is the total energy (in kilowatt hours or kWh) exported to PG&E's distribution grid by the Generator Account over the Relevant Period as defined in Special Condition 3.h.

b. The Annual Eligible Energy Credit Allocation

The Owner at the time the NEM2V Arrangement first takes service under Schedule NEM2V shall determine the initial percentage of Annual Eligible Energy Credits to be allocated to the Benefitting Accounts.

This allocation percentage will be specified by the Owner on Appendix A of either of the NEM2V application forms described in Special Condition 4.

Once allocated, Credits (in dollars) will be calculated per the OAS for each bundled service Benefitting Account as described in Special Condition 3.b. For a DA and CCA Service Benefitting Account, the Credit will be calculated by the ESP or CCA in accordance with the ESP or CCA's NEM2V Program.

(Continued)

ELECTRIC SCHEDULE NEM2V
VIRTUAL NET ENERGY METERING SERVICE

Sheet 11

SPECIAL
CONDITIONS:
(Cont'd.)

3. BILLING: (Cont'd.)

c. Monthly Energy Charge/Credit For an OAS with Baseline Rates

A Qualified Customer is a net consumer if the Benefitting Account's Eligible Energy Allocation percentage (A%) times the REGF's output (in kWh) is less than the Qualified Customer's usage (Customer Usage), and its net consumption in kWh is equal to:

$$\text{Customer usage} - (A\% \times \text{REGF's output}) = \text{net consumption}$$

Otherwise the Benefitting Account is a net producer and its net production in KWh is equal to:

$$(A\% \times \text{REGF output}) - \text{Customer Usage} = \text{net production}$$

If the bundled service Qualified Customer is a net consumer, the Benefitting Account will be billed for its net consumption in accordance with the Benefitting Account's OAS, except for the non-bypassable charge (NBC) calculation addressed in 3.e. (T)

If the bundled service Qualified Customer is a net generator, the net production shall be valued at the rate for the kWh up to the baseline quantity, if applicable, with any excess kWh generated, valued at the rate for the appropriate tier level in which the equivalent kWh of usage would fall. These credits, if any, do not reduce the charges from the NBC calculation addressed in 3.e. (T)

If the eligible customer-generator is being served under DA or CCA Service, ESP or CCA charges will be specified by their ESP or CCA in accordance with the eligible customer-generator's OAS and PG&E's Direct Access or Community Choice Aggregation tariffs. Applicable PG&E charges or credits will be valued as described in this Special Condition 3. (T)
(T)

For a DA and CCA Service Qualified Customer, Generation Rate Component credits, if any, do not reduce the charges owed to PG&E for energy supplied to the eligible customer-generator, nor do they reduce the NBC calculation in 3.e. (T)

(Continued)

ELECTRIC SCHEDULE NEM2V
VIRTUAL NET ENERGY METERING SERVICE

Sheet 12

SPECIAL
CONDITIONS:
(Cont'd.)

3. BILLING: (Cont'd.)

d. Monthly Energy Charge/Credit For an OAS with TOU (TOU)

A Qualified Customer is a net consumer for a discrete TOU period if the Benefitting Account's Eligible Energy Allocation Percentage (A%) times the REGF's output (in kWh) for that TOU period (REGF's TOU output) is less than the Customer's usage (Customer TOU usage) for the TOU period, and its net consumption in kWh is equal to:

Customer TOU usage – (A% x REGF TOU output) = net consumption

Otherwise the Qualified Customer is a net producer and its net production in kWh is equal to:

(A% x REGF TOU output) – Customer TOU usage = net production

(T)

Applicable PG&E charges or credits will be valued as described in this Special Condition 3.

For a DA and CCA Service Qualified Customer, applicable Generation Rate Component charges or credits will be calculated by the ESP or CCA under Consolidated PG&E Bill Ready Billing, in accordance with the ESP or CCA's NEM2V Program. Generation Rate Component credits, if any, provided by the ESP or CCA do not reduce any charges owed to PG&E for electric service provided to the Qualified Customer.

Any net consumption or net production shall be valued monthly as follows:

- If the bundled service Qualified Customer is a net consumer during any discrete TOU period, the net consumption shall be billed in accordance with that same TOU period in the Benefitting Account's OAS, except for the NBC calculation addressed in 3.e. (T)
- If the bundled service Qualified Customer is a net generator during any discrete TOU period, the net production shall be valued at the price per kWh at the same TOU period in the Benefitting Account's OAS.

For bundled service Qualified Customers on tiered rates, in the event that at the end of the monthly billing cycle, a Qualified Customer's net consumption (kWh) for all TOU periods totals zero (i.e. net production in one or more periods exactly offsets the net consumption in all other periods), then the value of usage and/or generation will be calculated using Tier 1 rates (as set forth in the OAS).

For a DA and CCA Service Qualified Customer, Generation Rate Component credits, if any, do not reduce the charges owed to PG&E for energy supplied to the eligible customer-generator including the NBC calculation addressed in 3.e. (T)

(Continued)

ELECTRIC SCHEDULE NEM2V
VIRTUAL NET ENERGY METERING SERVICE

Sheet 13

SPECIAL
CONDITIONS:
(Cont'd.)

3. BILLING: (Cont'd.)

e. Non-Bypassable Charges

Customers on this tariff must pay all non-bypassable charges pursuant to D.16-01-044 and Resolution E-4792 in each metered interval for each kilowatt-hour of electricity they consume from the grid. For the purposes of the tariff, the relevant non-bypassable charges are Public Purpose Program, Nuclear Decommissioning Charge, Competition Transition Charge, and Wildfire Fund Charge. NBCs shall be assessed only on the kilowatt-hours consumed in each metered interval. (T)

f. For an OAS With Monthly Minimum Charges

Eligible Customer Benefitting Accounts taking service on a residential OAS that are billed annually for net energy consumed, shall owe only the delivery minimum bill amount monthly, which shall be assigned as distribution revenue. The energy (kWh) related component shall be treated in the same manner as energy (kWh) consumed, as described in Special Condition 3.i below, unless otherwise provided for in the Benefitting Account's OAS.

For bundled service Benefitting Accounts, the net balance of all moneys owed to PG&E for the net energy (kWh) consumed must be paid on each monthly billing cycle. When bundled service Benefitting Accounts are a net electricity producer over a monthly billing cycle, the value of any excess kWh generated during the billing cycle shall be carried over to the following billing period and appear as a credit on the Qualified Customer's account, until the end of the Relevant Period.

For DA and CCA Service Benefitting Accounts, applicable Generation Rate Component charges or credits will be calculated by the ESP, or CCA under Consolidated PG&E Bill Ready Billing, and treated in accordance with the ESP or CCA's NEM2V Program.

g. For an OAS with Demand Charges

A NEM2V Qualified Customer on an OAS with demand charges may opt to receive a demand credit as described in Special Condition 3. To bill demand, demand readings from the Generator Account interval meter will be measured in each metered interval, allocated using the same allocation percentage for the Benefitting Account as is listed for that account in Appendix A, and then netted with the Benefitting Account's metered demand for the same interval. The netted demand will then be used for the calculation of the Benefitting Account's demand charges for the purposes of the OAS.

(Continued)

ELECTRIC SCHEDULE NEM2V
VIRTUAL NET ENERGY METERING SERVICE

Sheet 14

SPECIAL
CONDITIONS:
(Cont'd.)

3. BILLING: (Cont'd.)

h. Relevant Period for Billing and Account Modification

A Relevant Period consists of any twelve monthly billing cycles commencing on the date PG&E provides the Owner with PG&E's written approval to begin parallel operation of the REGF for purposes of participating in NEM2V, and on every subsequent anniversary thereof.

If a Benefitting Account terminates service with PG&E or there is a change of party at a Benefitting Account, prior to the end of any 12 monthly billing cycles, the Relevant Period for that Benefitting Account will consist of that period from the anniversary date until the effective date of that termination or Change of Party.

Change in Tenancy: When the customer of record for a Benefitting account in a NEM2V Arrangement changes, the new customer of record will take service under this schedule in accordance with the allocated percentage provided previously for the Benefitting Account in the NEM2V Arrangement with no action being required for the new Customer.

|
(N)

The subsequent Qualified Customer after a Change of Party at a Benefitting Account will start a new Relevant Period commencing on the date the new Qualified Customer takes service under this rate, and every subsequent anniversary thereafter.

On a going forward basis, the Owner has the option to add or remove Benefitting Accounts, and/or change the Annual Eligible Energy Credit Allocation to existing Benefitting Accounts.

If the Owner chooses to add or remove accounts or change the allocation, or the Default Account as defined in the next paragraph, it is the responsibility of the Owner of the Generator Account to notify all Benefitting Accounts in the NEM2V Arrangement of any change in their Annual Eligible Energy Credit Allocation. In order to elect this option, the Owner must submit (i) a revised Appendix A with the new allocations as described in Special Condition 2 and (ii) a new Appendix B, and (iii) payment of the applicable one-time setup or allocation modification charge described in Special Condition 2, if any. The submission of these three items must be made at least thirty business days prior to the next Billing Cycle start date, for it to be effective upon the first day of the next Billing Cycle. There will be no change to any of the (remaining) Benefitting Accounts' existing Relevant Period. (Charges if any, for account modifications are described in Special Condition 2.)

(Continued)

ELECTRIC SCHEDULE NEM2V
VIRTUAL NET ENERGY METERING SERVICE

Sheet 16

SPECIAL
CONDITIONS:
(Cont'd.)

3. BILLING: (Cont'd.)

(N)

i. Relevant Period True Up (Cont'd.)

Where the residential delivery minimum bill amount applies at the true up for a Bundled or Transitional Bundled Service Benefitting Account, and the accumulated net generation charges over the relevant period are greater than zero, the Qualified Customer will also owe an amount equal to the accumulated net generation charges. Where the residential delivery minimum bill amount applies at true up for a Bundled or Transitional Bundled Service Benefitting Account, and the accumulated net generation charges over the relevant period are less than or equal to zero, no credit for accumulated net generation charges will be applied to the amount owed by the Qualified Customer.

If the Qualified Customer is taking service under DA or CCA Service, separate true-ups will be calculated for the applicable PG&E charges and credits and the ESP or CCA charges and credits. If PG&E is the electric commodity service provider, this condition may be modified where the Qualified Customer has signed a contract to sell electricity to PG&E.

For a DA or CCA Service Qualified Customer, Generation Rate Component credits, if any, do not reduce the charges owed to PG&E for energy supplied to the Qualified Customer.

If a Benefitting Account's Relevant Period ends under any of the circumstances described in 3.h above:

- 1) The Qualified Customer will pay all charges owed at that time;
- 2) No payments shall be made for credits remaining after the true-up. However, in the event the Benefitting Account's allocation of energy (kWh), generated at the associated Generator Account and fed back to the electric grid, exceeds the energy (kWh) consumed during the Relevant Period, compensation shall be made for the excess energy (kWh) as described in Special Condition 5.

j. Billing Information

PG&E shall provide each Benefitting Account with its net energy (kWh) consumption information with each regular bill. That information shall include the current monetary balance owed PG&E for the net energy (kWh) consumed since the start of the current Relevant Period.

(N)

(Continued)

ELECTRIC SCHEDULE NEM2V
VIRTUAL NET ENERGY METERING SERVICE

Sheet 17

SPECIAL
CONDITIONS:
(Cont'd.)

3. BILLING: (Cont'd.)

k. OAS Payment Option

Eligible Small Customer (as defined in Rule 1) Benefitting Accounts will be required to pay monthly, unless they specifically request to pay annually, for the net energy (kWh) consumed. For commercial Benefitting Accounts other than Small Commercial, the net balance of all moneys owed must be paid on each monthly billing cycle. When the Qualified Customer is a net electricity producer over a monthly billing cycle, the value of any excess kilowatt-hours generated during the billing cycle shall be carried over to the following billing period and appear as a credit on the Qualified Customer's account, until the end of the Relevant Period.

l. Electric Service Providers (ESP) Charges:

If PG&E provides direct access (DA) metering for the ESP, UDC consolidated billing (that is, PG&E Consolidated Billing as described on PG&E's Rule 22), or ESP dual or consolidated billing support services for DA Qualified Customer served under PG&E's rates or their ESP's rates, PG&E may recover the incremental costs related to net energy metering from the customer's ESP as follows:

Metering services: \$104 Metering Service Base charge, plus \$73/hour for on-site work, plus materials.

Billing: \$85/hour plus materials.

4. INTERCONNECTION: (L)

For Customers to receive service on this NEM2V schedule, their interconnection application must be submitted on or before February 14, 2024 (NEM2V Sunset Date), and must comply with the following: (N)

i. The interconnection application date is defined as the submission date of an application that is free of major deficiencies and includes a complete application, a single-line diagram (for systems smaller than or equal to 30 kW, applicant does not need to upload a site-specific single-line diagram, but can instead select a template single-line diagram in the portal if applicable), a complete California Contractors State License Board Solar Energy System Disclosure Document (if applicable), a signed California Solar Consumer Protection Guide (if applicable) and for standard NEM, a signed Agreement and Customer Authorization.

ii. All customers seeking to interconnect on this NEM2V schedule shall submit final building permit sign off and electrical clearing by the authority having jurisdiction by no later than three years from the NEM2V Sunset date (before February 15, 2027).

PG&E is granted the discretion to give NEM2V tariff eligibility to a customer if a delay in meeting the NEM2V Sunset Date (February 14, 2024) is caused by the utility. Similarly, PG&E has the discretion to apply NEM2V eligibility to customers who fail to submit the final building permit sign off and other necessary documentation within three years from the NEM2V sunset date (before February 2027) if such failure is due to utility-caused delays. (N)

In order to receive approval for Parallel Operation of the REGF, including NEM2V Storage per Special Condition 6 (if applicable), or to resume service after being impacted by a Natural or Man-Made Disaster per Special Condition 7, the Owner must submit a completed PG&E application and interconnection agreement form as follows: (L)

Interconnection Costs: The Owner or Operator of the Eligible Generator must pay all interconnection costs and application fees required under Rule 21*, including but not limited to re-wiring, trenching, conduit, and other facility costs that are needed. This application fee must be paid through PG&E's online application portal in order to complete the application, unless otherwise directed by PG&E. For NEM2V Storage Interconnection cost, see Special Condition 6. For application costs associated with systems impacted by a Natural or Man-Made Disaster, see Special Condition 7. (L)

* See Rule 21 Section B.1 Applicability regarding NEM-2 projects greater than 1 MW interconnecting on Transmission. (L)

ELECTRIC SCHEDULE NEM2V
VIRTUAL NET ENERGY METERING SERVICE

Sheet 21

SPECIAL
CONDITIONS:
(Cont'd.)

4. INTERCONNECTION: (Cont'd.)

interconnection. Interconnection fees for REGFs smaller than 1 megawatt in size will be based on PG&E's interconnection costs from its June 2015 Advice Letter filed in compliance with D.14-015-033, and includes NEM Processing and Administrative Costs, Distribution Engineering Costs, Metering Installation and Commission Costs, unless changed by a subsequent Advice Letter approved by the Commission.

For the purposes of the NEM2V tariff, the rating of the generating facility, for the purposes of comparing its size relative to the 1 megawatt (MW) limit, will be as described in the NEM2 tariff.

In order to promote the safety and reliability of the customer REGF, the applicant is required to verify as a part of each interconnection request for this tariff that all major solar system components are on the verified equipment list maintained by the California Energy Commission and other equipment, as determined by PG&E, should be verified by the customer as having safety certification from a nationally recognized testing laboratory.

Applicant is required to verify as a part of each interconnection request for this tariff, that (i) a warranty of at least 10 years has been provided on all equipment and on its installation, or (ii) have a 10-year service warranty or executed "agreement" ensuring proper maintenance and continued system performance.

5. NET SURPLUS ELECTRICITY COMPENSATION (NSC):

Pursuant to P.U. Code Section 2827 (h)(4)(A), this Special Condition was established to provide a NEM2V Benefitting Account having Net Surplus Electricity, (defined as all electricity generated by an eligible Generator Account that is allocated to an eligible Benefitting Account Qualified Customer measured in kilowatt-hours over a Relevant Period – as defined in Special Condition 3.h of this tariff – that exceeds the amount of electricity consumed by that eligible Benefitting Account Qualified Customer), with Net Surplus Electricity Compensation (NSC) for the Net Surplus Electricity, while leaving other ratepayers unaffected. A NEM2V Benefitting Account Qualified Customer who has Net Surplus Electricity will be known as a Net Surplus Generator.

a. **NSC Applicability** – All bundled service Net Surplus Generators that satisfy the conditions in the Applicability Section of this tariff and take service under this rate schedule are eligible to receive NSC from PG&E if they have a true-up on, or following, the effective date below.

Net Surplus Generators who receive DA Service from an ESP or who receive CCA Service from a CCA are not eligible to receive NSC from PG&E but may contact their ESP or CCA to see if they provide NSC.

The effective date for a Net Surplus Generator Benefitting Account to begin to be eligible to receive NSC on a NEM2V Benefitting Account's true-up will be at the end of its first and every subsequent Reconciliation Period under the NEM2V tariff following January 1, 2011.

(L)

(L)

(Continued)

ELECTRIC SCHEDULE NEM2V
VIRTUAL NET ENERGY METERING SERVICE

Sheet 22

SPECIAL
CONDITIONS:
(Cont'd.)

5. NET SURPLUS ELECTRICITY COMPENSATION (NSC): (Cont'd.) (L)

b. **The NSC Rate** – The NSC Rate is defined as the simple rolling average of PG&E’s default load aggregation point (DLAP) price from 7 a.m. to 5 p.m., for a 12-month period. PG&E shall use the NSC Rate as the value of the electricity portion of its net surplus compensation rate.

PG&E will calculate the NSC Rate each month. It will be effective on the first day of that month and PG&E will use it in the NSC Calculation for any Net Surplus Generators with a Relevant Period completed in that month (True-Up Month).

The DLAP Cutoff Date will be defined as the twentieth (20th) day of the month prior to the True-Up Month.

PG&E will wait five (5) days after the DLAP Cutoff Date for the CAISO to have time to finalize the day-ahead PG&E DLAP prices. The NSC Rate will then be calculated as the simple average of the prices for all hours between 7 a.m. and 5 p.m. over a one (1) year period ending on the DLAP Cutoff Date.

c. Pursuant to D.11-06-016, PG&E includes a Renewable Attribute Adder (RAA) based on the California Energy Commission (CEC) implementation methodology.

Under the CEC’s Renewables Portfolio Standard (RPS) Eligibility Guidebook⁷, an ownership verification and tracking process is set forth for Renewable Energy Credits (RECs) created by Net Surplus Generators.

PG&E will pay a Renewable Attribute Adder (RAA) for Net Surplus Electricity if the Net Surplus Generator completes Form 79-1155-02 - Schedules NEM2, NEM2V, NEM2VMSH Net Surplus Electricity (NSE) Renewable Energy Credits Compensation Form which requires that each true-up a Net Surplus Generator confirm it or its REC aggregator has:

- 1) certified ownership of Net Surplus Electricity Renewable Energy Credits associated with their Net Surplus Electricity;
- 2) obtained certification for the Renewable Portfolio Standards (RPS) eligibility of the REGF from the CEC and provide evidence of this certification to PG&E; and
- 3) transferred the ownership of the WREGIS Certificates to PG&E.

⁷ The CEC RPS Eligibility Guidebook is available at: <https://www.energy.ca.gov/programs-and-topics/programs/renewables-portfolio-standard>

ELECTRIC SCHEDULE NEM2V
VIRTUAL NET ENERGY METERING SERVICE

Sheet 24

SPECIAL
CONDITIONS:
(Cont'd.)

6. NEM2V Storage

a. Definition of NEM2V Storage

NEM2V Storage is defined as an arrangement where a NEM2V REGF including a storage device is located behind the same meter on the generating account under a configuration that prevents the storage device from charging from another source other than the co-located NEM2V REGF generator (i.e. the storage cannot be charged from grid power). This can be accomplished with a physical, non-import relay—or a functionally equivalent non-import configuration as outlined in the PG&E Distribution Generation Interconnection Handbook—to prevent grid power from flowing toward the battery.

If the NEM2V Storage device has found to be charging from the grid, then this arrangement shall no longer be eligible for this tariff.

b. Isolated Operation*

(T)

The REGF and storage device can be operated in isolation to serve loads that are otherwise part of the NEM2V arrangement (i.e., loads associated with any meter that is part of the arrangement during normal, parallel operation) only during grid outages and for testing purposes. Any device supporting isolated operation must be interconnected according to Rule 21 and all PG&E and other applicable standards. All loads to be powered by the REGF and battery storage in isolation mode must be located under the same PG&E delivery point. The isolated operation must be configured such that no load or generation registers on Generating or Benefiting Account meters when operating in isolation.

c. Interconnection Cost

Customers interconnecting storage shall be responsible for all applicable charges in Electric Rule 21**.

(T)

d. Storage Size Dependent Requirements

Requirements may differ depending on the size of the NEM2V Storage. The storage device size is determined by the inverter alternating current nameplate rating.

(L)

(L)

* Planned or Emergency Outages: During planned or emergency outages, operation of the REGF and storage in isolation from the grid is permitted to serve onsite loads as described in section "Isolated Operation".

(N)

** See Rule 21 Section B.1 Applicability regarding NEM-2 projects greater than 1 MW interconnecting on Transmission.

(N)

(T)

(L)

(Continued)

ELECTRIC SCHEDULE NEM2V
VIRTUAL NET ENERGY METERING SERVICE

Sheet 25

SPECIAL
CONDITIONS:
(Cont'd.)

- 7. Natural or Man-Made Disasters (T)
- NEM2V Transition Eligible Customers impacted by a Natural or Man-Made disaster⁸ may request to resume service on this tariff from (i) the date of the issuance of their original pre-natural-or-man-made disaster "permission to operate" (PTO) letter until (ii) the date of the customer's first Energy True Up in the twenty first (21st) year. (L)

An Impacted Owner must:

- (i) reapply for interconnection with a replacement system(s) sized to generate no more than the 12 months of historic, or estimated usage (kWh), where the new NEM2V Arrangement is located on the same integral parcel as the original NEM2V Arrangement, and
- (ii) when reapplying for interconnection, submit proof of destruction of the renewable generator(s), if requested by PG&E.

When the Generator account in the NEM2V Arrangement is impacted by a Natural or Man-Made Disaster, PG&E will true-up the NEM2V Arrangement pursuant to Special Condition 3.i., and Net Surplus Compensation will be issued, if any, pursuant to Special Condition 5 up to the date of the Natural or Man-Made disaster. If the Generator Account is not impacted while one or more of the benefitting accounts are, a True-Up will only occur for the impacted accounts, and PG&E will continue to bill the remaining⁹ accounts on NEM2V, unless requested by the Owner. Any other Owner-requested changes to the NEM2V Arrangement beyond being impacted by a Natural or Man-Made Disaster will be in accordance with Special Condition 3.h.

The intervening period from destruction of the generator(s) to permission to operate (PTO) of the replacement generator(s) must be no longer than two years, unless reasonable documentation acceptable to PG&E is provided showing that the new interconnection is in process.

(L)

(L)

(L)

⁸ Natural or man-made disasters includes such events as a fire, earthquake, flood, or severe storms.

⁹ PG&E will proactively bill the remaining benefitting accounts on NEM2V when there are at least two benefitting accounts. When only benefitting accounts are impacted, Owners do not need to submit an interconnection application to enact this provision, unless requested by PG&E.

(Continued)

ELECTRIC SCHEDULE NEM2V
VIRTUAL NET ENERGY METERING SERVICE

Sheet 26

SPECIAL
CONDITIONS:
(Cont'd.)

7. Natural or Man-Made Disasters (Cont'd.)

This provision is only available if the PG&E customer of record listed on the Generator Account on the new NEM2V Arrangement is the same Owner as was listed on the original NEM2V Arrangement. If the generator(s) is not replaced by the same NEM2V Owner, but the property is sold to a new owner after the destruction of the generator(s), this provision does not extend to the new owner. The new owner must apply for interconnection and take service under an applicable net energy metering tariff in effect at the time and is subject to all the requirements of a new customer seeking interconnection for that net energy metering tariff.

Customers impacted by Natural or Man-Made Disasters who meet the requirements included in this Special Condition and whose aggregate replacement system(s) is sized no greater than 1 megawatt (MW)¹⁰ are exempt from the interconnection application fee when reapplying.

Owners impacted by Natural or Man-Made Disasters must comply with all requirements associated with the installation of Smart Inverter technology, as defined in Electric Rule 21.

(L)

(L)

¹⁰ As defined in Special Condition 4.

SPECIAL
CONDITIONS:
(Cont'd.)

8. NEM2V Legacy Provisions

(L)

This Special Condition is applicable to all Customers receiving service on NEM2V, and who have submitted all documentation necessary to receive service on the NEM2V Electric Rate Schedule.

- a. Pursuant to D.22-12-056, Customers applying to take service under this Electric Schedule NEM2V on or after April 15, 2023, until the NEM2V sunset date (February 14, 2024) may continue to take service on NEM2V for nine years from the date of the interconnection of their REGF measured from the date of permission to operate (PTO) and ending at the conclusion of the Customer's applicable Relevant Period that ends immediately on or after the ninth anniversary of the original PTO date. Customers who submit applications to take service under this Electric Schedule NEM2V before April 15, 2023 including customers who have pending applications, are subject to the nine-year provisions in this Special Condition 8a under either of the following circumstances: (i) if the application has major deficiencies that are not corrected before April 15, 2023; or (ii) if the customer fails to submit final building permit sign off and electrical clearing by the authority having jurisdiction before April 15, 2026.
- b. Pursuant to D.16-01-044, Customers receiving service on this Electric Schedule NEM2V, or who have submitted applications that are free of major deficiencies and include all necessary documents to receive service on NEM2V before April 15, 2023, are eligible to continue receiving service on NEM2V for a period of 20 years from the date of interconnection of their REGF measured from the date of PTO and ending at the conclusion of the Customer's applicable Relevant Period that ends immediately on or after the 20th anniversary of the original PTO date. For example, if a Customer initially received PTO on April 1, 2018, the Customer is eligible to continue receiving service on this tariff through the conclusion of the Relevant Period ending immediately on or after March 31, 2038.

Customers served on Schedule NEMV who elect to make a one-time switch to the NEM2V Schedule prior to the conclusion of their Schedule NEMV 20-year transition period and prior to April 15, 2023, can continue service under the NEM2V Schedule from the date of their original Schedule NEMV PTO through the conclusion of their 20-year transition period; these Customers may not restart their 20-year transition period by electing to move to this Schedule. On or after April 15, 2023, until the NEM2V Sunset date (February 14, 2024) customers served on Schedule NEMV who elect to make a one-time switch to the NEM2V Schedule prior to the conclusion of their Schedule NEMV 20-year transition period can continue service under the NEM2V Schedule from the date of their original Schedule NEMV PTO through the lesser of the conclusion of their 20-year transition period or nine years; these Customers may not restart their 20-year transition period by electing to move to this Schedule.

Effective March 15, 2024
Resolution

ELECTRIC SCHEDULE NEM2V
VIRTUAL NET ENERGY METERING SERVICE

Sheet 28

SPECIAL
CONDITIONS:
(Cont'd.)

- 8. NEM2V Legacy Provisions (Cont'd) (L)

 - b. Customers electing to switch to the NEM2V Schedule prior to the conclusion of their Schedule NEMV 20-year transition period permanently forfeit any of their Facility's remaining Legacy Period (transition period) eligibility on Schedule NEMV and may not later change back to receiving service under Schedule NEMV. Customers at the end of their 20-year NEMV enrollment who transitioned to the NEM2V tariff may not restart a 20-year transition period under NEM2V. They should remain on the current NEMV successor tariff (currently NEM2V) and will be transitioned to the applicable tariff required for customers installing eligible technologies or as otherwise directed by the CPUC.
 - c. Modifications¹¹. REGFs eligible for the 20-year or 9-year transition period specified above that are modified and/or repaired shall remain eligible for the remainder of their 20-year or 9-year transition period provided that the modifications and/or repairs do not increase the REGF's nameplate rating capacity, as established when the REGF was originally interconnected, by more than the greater of:
 - 1) 10 percent, or
 - 2) 1 kW; (L)

Storage Devices: If a current NEM2V Renewable Electrical Generation Facility (REGF) owner adds a storage device, without any other modifications to its generating unit, there is no impact to the Generation Facility's current tariff status, including the legacy period. (N)
 - d. Transferability. (N)
 - 1) REGFs eligible for the 20-year or 9-year transition period shall not lose their eligibility if transferred to a new owner, operator, or PG&E account, provided the REGF remains at its original location.¹² (L)

¹¹ Per D.22-12-056, after April 14, 2023 until the NEM2V Sunset Date (2/14/2024), customers who modify their systems above the allowable threshold will be subject to the lesser of the 20-year legacy from their original PTO, or the 9-year legacy period from the PTO of the modified system. Customers making modifications and/or additions to their REGF that exceed the 10 percent, or 1 kW limit referenced above have the option of either interconnecting the additions and/or modifications separately under another eligible tariff (i.e., Rule 21 non-export), or have the entire REGF served under the Virtual Net Billing Tariff (NBTv) subject to the terms and conditions contained therein. If an existing NEM2V customer chooses to interconnect the addition under Rule 21 non-export, the Customer's original 20-year/9-year transition period is not altered. If an existing NEM2V customer chooses to have the entire system served on the NBTv then the customer will be eligible for the same 9-year legacy period under the NBTv as a new NBTv customer and, if applicable, they will also receive the 9-year export compensation rate lock-in period and ACC Plus based on the calendar year that they receive PTO of the upgraded system on NBTv.

¹² The transfer of an existing REGF to a new location is considered a new installation requiring a new Interconnection Agreement that is subject to the applicable tariffs in place at the time the new Interconnection Request is completed. (L)

ELECTRIC SCHEDULE NEM2V
VIRTUAL NET ENERGY METERING SERVICE

Sheet 29

SPECIAL
CONDITIONS:
(Cont'd.)

9. Prevailing Wage

(L)

California Public Utilities (PU) Code Section 769.2 requires a contractor that installs a Renewable Electrical Generation Facility (REGF) or associated battery storage to comply with prevailing wage requirements in order for the facility to participate in a tariff developed pursuant to PU Code Section 2827 or 2827.1. These requirements are stated in PU Code Section 769.2 and in case of any discrepancy between tariff language and the PU Code, the language in the PU Code prevails.

The requirements are:

- (1) The contractor shall pay each construction worker employed, at minimum, the general prevailing rate of per diem wages, except that an apprentice registered in a program approved by the Chief of the Division of Apprenticeship Standards shall be paid, at minimum, the applicable apprentice prevailing rate.
- (2) The contractor shall maintain and verify payroll records pursuant to Section 1776 of the Labor Code and make those records available for inspection and copying as provided in that Section. The contractor shall not be required to provide copies of certified payroll records to any entity other than the Department of Industrial Relations or the California Public Utilities Commission (Commission)¹³.
- (3) The contractor shall biannually, on July 1 and December 31 of each year, submit to the Commission digital copies of its certified payroll records for projects¹⁴.

The requirements of PU Code Section 769.2 do not apply to projects with a complete interconnection application submission date before January 1, 2024. All projects with an interconnection application submission date on or after January 1, 2024, including applications to modify an existing REGF, are subject to the PU Code 769.2 requirements with the following exceptions:

- (1) A residential REGF that has a maximum generating capacity of 15 kilowatts or less of electricity.
- (2) A residential REGF that is installed on a single-family home.
- (3) A project that is a public work, as defined in Section 1720 of the Labor Code, and that is subject to Article 2 (commencing with Section 1770) of Chapter 1 of Part 7 of Division 2 of the Labor Code.
- (4) A REGF that serves only a modular home, a modular home community, or multiunit housing that has two or fewer stories.

¹³ Pursuant to Decision 23-11-068 the contractor may also be required to provide these records to any entity that the Commission designates to act on its behalf to implement this requirement.

¹⁴ Contractors may submit their records on a voluntary basis more often than the biannual requirement stated in the PU Code 769.2.

9. Prevailing Wage (Cont'd.)

(L)

If PU Code Section 769.2 applies, the Customer must execute the **“Prevailing Wage Disclosure Form”** and submit the form with their interconnection application, and customer’s contractor shall confirm to PG&E that it is up to date with their past required submittals of payroll records.

If customer’s contractor has been found to have willfully violated PU Code Section 796.2 in connection with the construction of customer’s REGF, *that facility* shall not be eligible to receive service pursuant to a tariff developed based on PU Code Sections 2827 or 2827.1.

If a willful wage violation is alleged, the customer’s REGF will remain on the tariff until the Department of Industrial Relations (Department) or a court completes their assessment and makes a final determination. At that time, if the contractor is found in willful violation, then PG&E will be required to remove the customer’s REGF implicated by the violation from the applicable NEM/NBT tariffs and transition the Customer to the PURPA compliant tariff on the next billing cycle (after the required 60-day notification). While on the PURPA compliant tariff, the REGF will be compensated based on that tariff and the REGF may be subject to Departing load and Standby charges (if applicable), as the REGF is no longer served under the applicable NEM/NBT tariffs. The customer’s REGF billing meter will be trued up at the end of the billing cycle (after the required 60-day notification) before transitioning to the PURPA compliant tariff and any credits remaining after the true-up will be forfeited. If the customer’s REGF is enrolled in a virtual tariff all benefiting accounts will also forfeit their credits.

If the violation occurs on a single generating account with benefiting accounts, PG&E will notify the Customer(s) at least 60-days in advance of automatically transitioning the customer’s REGF on their next billing cycle to a PURPA compliant tariff.

If a willful wage violation is reversed or nullified by the determining body and the generation account holder or Customer/property owner provides documentation to the utility evidencing such reversal/nullification, then the REGF will be able to regain access to the applicable NEM/NBT tariff as of the next billing cycle after the reversal of the willful wage violation.

Beginning January 1, 2025, contractors who have been found in violation of the prevailing wage rule in PU Code Section 769.2 will not be permitted to apply to interconnect facilities utilizing tariffs established pursuant to PU Code Sections 2827 or 2827.1.

Effective March 15, 2024
Resolution

ELECTRIC SCHEDULE NEM2V
VIRTUAL NET ENERGY METERING SERVICE

Sheet 31

SPECIAL
CONDITIONS:
(Cont'd.)

10. Customers submitting their application after the NEM2V Sunset Date (February 14, 2024)

Pursuant to Decision 23-11-068, Customers with an interconnection application date after the NEM2V Sunset Date (February 14, 2024) will take service and be billed on this NEM2V Schedule on an interim basis, and transition to the Virtual Net Billing Tariff (NBTV) once it is operational. These customers will interconnect using NEM2V interconnection forms, or once available, NBTV interconnection forms. The Customer's NBTV 9-year Legacy period begins to run as of customer's interconnection date; customer has no legacy period on this NEM2V Schedule. Such Customers will transition to NBTV at the end of the first Relevant Period in which the NBTV billing is operational, and at which time the Customer is required to take service on an OAS in accordance with the requirements of the NBTV.

Until the NBTV tariff is approved this Special Condition will govern the rules for customers who submit interconnection applications, either using NEMV or NBTV interconnection forms, after the NEM2V Sunset Date.
