

Chukchansi Park, Fresno Grizzlies

Video Transcript

- Energy efficiency means everything to our business. We have an obligation to be a model of energy efficiency for the city of Fresno. We have over five hundred thousand people come into our park every year, so to show something like this off is huge. When I first got in here last February, looking around the ball park, we needed a lot of upgrades. For the first thing I needed to do was to get ahold of PG&E and ask them, what can we do to improve this ball park, and we can't afford to keep going the way that we're going now, cause it's just not sustainable. When we called the 800 number and within minutes Jordan, our account exec called us right back and we got the ball rolling from there.
- When Shaun and the Grizzlies approached me about doing their project we consulted with multiple departments within PG&E, did the audit, got the proposal got the zero percent financing portion done and really followed it from step one all the way through to the completion and issue into the check.
- Jordan with PG&E is fantastic. Anytime we need anything big or small, he's there for us.
- Electric Motor Shop's involvement in this project through the Trade Pro Network, allowed us to come together with Chukchansi Park and all the tools that the Trade Pro Network allowed us to use to put together the project. The scope of this project required Electric Motor Shop, Chukchansi Park, and PG&E to come together to work on retrofitting over 2000 lights throughout the entire stadium.
- With the 0% interest finance option we were able to knock out a project that would've taken us two to three years, in just two months. A project like this might seem like a big, daunting task PG&E really made it seem easy. I think that this would've been a project we would've had to wait on had we not had the financing option available through PG&E. For us, the sooner we start being efficient and start saving, the better. We didn't want to wait and we didn't have to thanks to PG&E.
- [Richard] It's such a great example for the community, the things we can do with the available technology today working with great companies like PG&E.
- [Shaun] I think our perspective of PG&E, for me, has changed in a way that now I know we have a partner with those guys, and they've a vested interest in this ball park, helping it be more efficient for the next few years to come.
