

## **PG&E - Marketing & Communications | Top 5 Vampire Appliances**

PG&E is helping customers save energy and money by unmasking the biggest vampire appliances hiding in your home. Those appliances and devices silently sapping energy even when they're not in use. TVs aren't entertainment hubs by day, but transform into energy draining draculas at night. The solution, smart power strips or adjust your screen settings. Chilling chargers, laptop adapters, along with phone and tablet chargers can all suck energy. The fix, unplug when they're not in use.

Coffee makers and microwaves may be part of your morning routine, but they're power lights, clocks, and timers, can zap energy and leave your budget jittery. So after use, pull the plug. Dreadful desktops computers feast on power while working and at night. Use sleep settings to avoid big bites out of your bills. Gamers beware, gaming consoles never sleep. Disconnect or adjust your shut off settings. PG&E, helping customers banish the boo factor with some simple solutions to save.
