

Community Wildfire Safety Program

Using layers of protection to keep you safe

Our safety efforts are preventing wildfires and improving the reliability of your service.

Using technology to better predict, monitor and respond to wildfires and severe weather

Installing strong poles and covered powerlines to reduce wildfire risk and improve reliability

Completing 10,000 miles of undergrounding in the highest wildfire risk areas

Removing or pruning trees to keep them away from powerlines

Installing powerline safety settings that shut off power if a hazard is detected

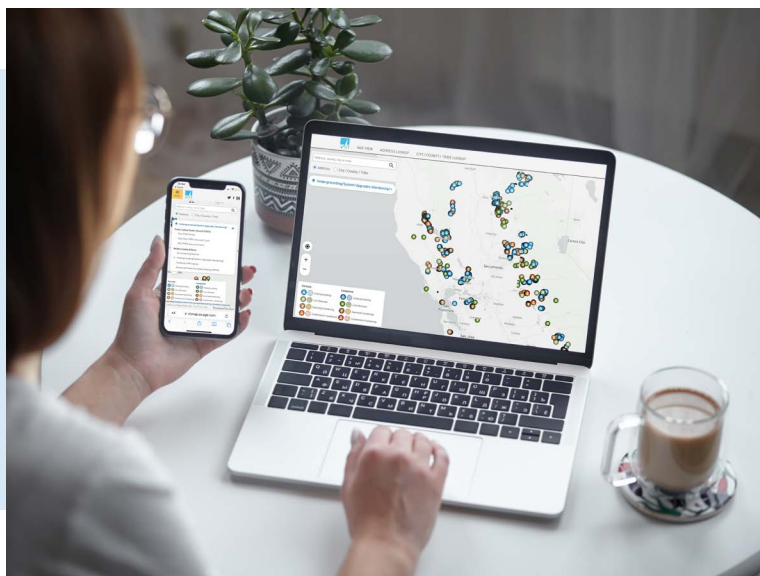

Turning off power for safety as a last resort during severe weather
